PROFESSIONAL SUMMARY

Backend Engineer with 4+ years of experience designing and maintaining scalable APIs and services with Java and Spring Boot. Experienced in SQL databases, serverless architecture, and AWS deployment.

TECHNICAL SKILLS

Languages: Java, SQL, PHP, TypeScript, Bash
Frameworks: Spring Boot, Laravel
Cloud & DevOps: AWS (Lambda, API Gateway, CloudFormation, S3, Cognito, CloudWatch, IAM), Azure, Docker, CI/CD (GitHub Actions), Linux
Databases: PostgreSQL, MySQL
Architecture & Patterns: REST API Design, Swagger, Microservices, Serverless, Layered architecture (Controller-Service-Repository), MVC
Testing libraries: JUnit, PHPUnit
Tools: Git, Jira, Postman

PROFESSIONAL EXPERIENCE

Backend Engineer | Tekchoice LLC Jun 2024 - Present

- Collaborated with a U.S. credit union's technical team using the internal Symitar tool, holding daily client meetings to gather requirements and translate them into technical stories.
- Designed and implemented 6+ serverless Lambda functions for a self-service portal, enabling clients to request loan deferments online instead of visiting a branch, consuming data from the Fiserv DNA banking core system.
- Applied Infrastructure as Code on AWS using CloudFormation and configured monitoring alerts with CloudWatch, improving system observability.

Backend Engineer Jr. | DXC Technology Company Sep 2023 - Jun 2024

- Developed backend features in Java and Spring Boot for Grupo Bimbo, one of the country's largest bakery companies, replacing a legacy catalog and inventory system and building REST APIs under a layered architecture (Controller-Service-Repository).
- Refactored the data layer, removing DTOs that duplicated information already present in the entities and consolidating data access through models, simplifying the codebase and reducing maintenance complexity.
- Wrote unit tests with JUnit to ensure the quality and stability of the new module, reducing regression risk during the migration.

Software Developer Jr. | Folio3 Software Inc. Aug 2022 - Apr 2023

- Fixed bugs and implemented new features under Scrum methodology and the MVC pattern, within a team of 5+ developers.
- Wrote technical documentation and unit tests for each release, ensuring continuous integration with the existing CI/CD pipeline.
- Maintained and developed a REST API using an ORM for a platform serving FDA-regulated companies.

PROJECTS

BMV Technical Audit — github.com/GodNoden/bmv-audit
Lighthouse · axe · TypeScript · SVG · Performance
Independent, non-commercial audit of bmv.com.mx focused on measurable performance, accessibility, and architecture findings.

Kapital Landing Rebuild — github.com/GodNoden/kapital-clone
Astro · TypeScript · Tailwind v4 · i18n
Engineering study rebuilding Kapital's landing page.

Aggora — Kafka Event Pipeline for Market Data — github.com/GodNoden/aggora
Java · Spring Boot · Quarkus · Apache Kafka · Kafka Streams · Prometheus · Docker
Event-driven market data pipeline built twice, in Spring Boot and Quarkus, both writing the same topics so their behaviour can be compared side by side.

EDUCATION

B.S. in Computer Systems Engineering | Universidad de Guadalajara 2018 - 2023
CUCEI | Guadalajara, Mexico
